#### Description

Check for executable file instead of path directory directory:

As explained here:

<https://www.joomlapolis.com/forum/145-community-builder/179071-imagemagick-path-wrong-since-upgrade-to-cb-17#180067>

isdir() is subject to openbasepath restrictions while executables are not.

Fix is to replace is\_dir() with is\_executable( dir + imagemagic executable file )
