CB Privacy - Bug #7570

Userlist removal of users may not be working in some cases

03 June 2019 05:23 PM - krileon

| Status:   | Closed       | Start date: | 03 June 2019 |
| Priority: | Normal       | Due date:   |             |
| Assignee: | krileon      | % Done:     | 100%        |
| Category: |              | Estimated time: | 0:00 hour |
| Target version: | 6.1.0    |             |             |

Description
When searching a userlist for a user that has marked the field being searched as private it can sometimes display the user instead of removing their row. Unsure of cause as is unreliable.

History

#1 - 03 June 2019 05:25 PM - krileon
This is due to the fieldname check. It's checking if the field name exists in$_REQUEST, but for age range it uses FIELDNAME_minval and FIELDNAME_maxval. This check needs to be improved.

#2 - 03 June 2019 05:43 PM - krileon
- Status changed from Assigned to Resolved
- % Done changed from 0 to 100

__minval and __maxval will now trigger userlist privacy checks

#3 - 10 September 2019 06:09 PM - krileon
- Target version changed from 945 to 6.1.0

#4 - 11 September 2019 05:28 PM - krileon
- Status changed from Resolved to Closed
